

## Aerial Lift Safety for School Employees

Estimated Time to Complete: 25 minutes

### Course Description

Although aerial lifts offer stable and safe access to work areas where the use of ladders is impossible, they also account for dozens of deaths every year. While not intended to replace hands-on training for the specific aerial lift used at your school, *Aerial Lift Safety for School Employees* provides school staff members with an overview of important safety procedures to be used when operating any aerial lift. The goal of this course is to provide school staff members with a basic understanding regarding the safe operation of aerial lifts and policies that help ensure safety.

### Common Themes

- The different types of aerial lifts
- Training requirements for aerial lifts
- Inspection and maintenance of aerial lifts
- Safe operation procedures for lifts
- Aerial lift safety policies for school employees

### Authors

Mr. Jeremy Norton got his start in the safety business when he enlisted out of high school into the US Navy. He became a nuclear engineer on the USS Carl Vinson, where he was responsible for the training and safety program for a nuclear power plant machinery room. After leaving the service, Jeremy ran safety and training programs for semi-conductor manufacturer firms, and an international wind power utility. Jeremy has a Masters in Business Administration, and is currently the CEO of Affordable Safety Training LLC.

### Training Environments

*SafeSchools* is ideal for a blended learning environment, complementing in-service or video training, or as a stand-alone training course. The *SafeSchools* approach engages the learner in an e-learning environment; while a Compliance Management System automatically tracks his/her progress through the courses. This assists the district administrator or training coordinator in demonstrating compliance.
